# Moon Phase Coasters: printing

Six prints on three plates. Navy, cream and slate.

## 1 Print the coasters, two to a plate

- **moon_coasters_crescent_quarter.3mf, then moon_coasters_gibbous_full.3mf.**
- Face up, no supports. The moon, craters and stars are the top three layers.
- About 2 h each plate. Navy 33.8 g, cream 3.6-5.6 g, slate 1.7-3.6 g.

## 2 Print the rack

- **moon_coaster_rack.3mf: the base and the arch panel, both flat.**
- About 2 h 2 m. Navy 41.1 g, cream 3.2 g.
- 0.2 mm layers, supports off, for every plate.

Design-review renders of the real parts, not photos. Navy, cream and slate are the print colours.

# Moon Phase Coasters: putting it together

Design-review renders of the real parts, not photos.

## 1 Stand the panel in the front groove

- **Stars to the front. Push it down to the bottom of the groove.**
- It stands on its own, no glue.

## 2 Lower the coasters into the cradles

- **Moon side to the front. Each one rests in its own curved slot.**
- The front coaster shows through the window. Put any phase in front.
- Lift a coaster straight up to take it out.

### Good

- Coasters drop in and lift out by hand.
- The panel stands upright in its groove.

### Tell me

- if a slot is tight or a coaster rattles,
- or a star, crater or moon edge printed badly.

Design-review renders of the real parts, not photos. Navy, cream and slate are the print colours.
