Bayonet Jar: closing the lid

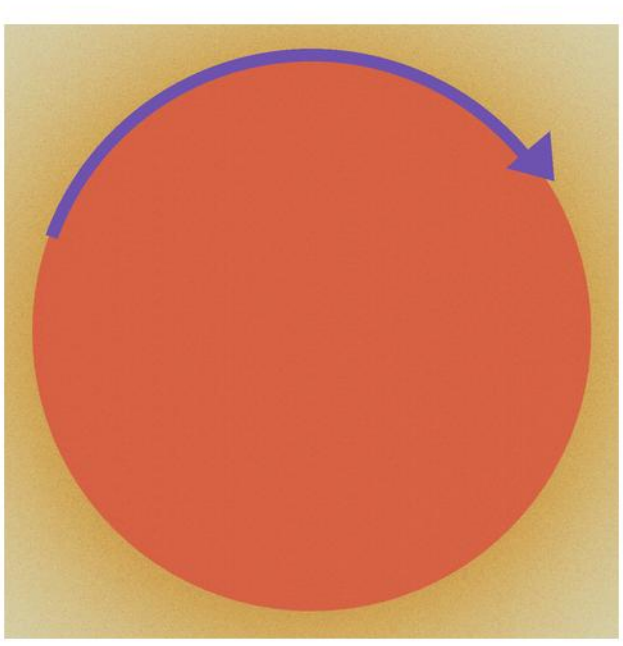

Push down, twist clockwise. The same on every size.

1 Line the lid up

- **Set the lid on the jar and turn it gently until it drops, about 8 mm.**
- Three bumps inside the lid fall into the three notches at the jar's rim.

2 Twist it clockwise

- **A short twist, about 25 degrees, the way you'd close any jar.**
- It pulls down onto the rim and stops on its own.

3 Closed

- To open: twist it back the other way and lift.

Good

- Closes clockwise and stops on its own.
- No rattle when it's shut.

Tell me

- if it's stiff to turn, or rattles shut;
- which size it was.

Design-review renders of the real parts, not photos. Colours are only to tell the parts apart.
